

ClearView DropOut

DIRECTIONS:

1. For very cloudy pools, add one quart of CLEARVIEW "DROP OUT" per 40,000 gallons of water surface area with the filter system operating.
2. After one hour shut pump off.
3. The suspended particles will fall to the bottom and the water will be clear. The next day, vacuum the pool to waste.
4. Initial vacuuming may force some particles back into temporary suspension. They will settle again and an additional vacuuming may be necessary.
