

Critical Usage Information

Clear Spa 104 Spa Seltzer

ACTIVE INGREDIENT:

Sodium Dichloroisocyanurate*30.69%

OTHER INGREDIENTS:.....69.31%

TOTAL:100.00%

*Available Chlorine 19.2%

The following is only basic usage directions. Refer to the actual product label for First Aid, Warnings and other statements of use.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

For routine maintenance of spas and hot tubs to control bacteria and algae:

1. Before using spa or hot tub, test water, pH, free chlorine and alkalinity using a reliable test kit. Adjust pH to between 7.2 – 7.6.
2. With the pump on, and using the table below as a guide, add sufficient tablets to establish a level of 3 – 5 ppm free chlorine as determined by the test kit. Do not enter the water until the free chlorine level drops to 5 ppm or less. Re-entry into treated spas is prohibited above levels of 5ppm due to risk of bodily harm.

Before using the spa, bathers should shower in order to avoid adding soap, lotions, or oils from the body into the water. Avoid overloading the spa.

Depending on how heavily the spa is used, it may be necessary to super chlorinate the water as frequently as after each use or as infrequently as once per week, in a moderately used spa.

1. Using the table as a guide, superchlorinate water to 6.0 – 8.0 ppm free chlorine by adding additional tablets to the spa or hot tub.
2. Do not allow bathers to enter the spa [or hot tub] until the free chlorine falls to 3.0 to 5.0 ppm. Re-entry into treated spas is prohibited above levels of 5ppm due to risk of bodily harm.
3. If spa or hot tub water does not clear after superchlorination treatment, drain, clean and refill with fresh water.

DOSAGE CHART

For 0.4 Ounce (12 Gram) Tablets

FREE Chlorine (PPM)	Gallons of Water in Spa					
	300	340	355	400	500	550
Number of Tablets
