

## ClearView

Once upon a time there was a little green tree frog named Moto who lived on a Japanese island. One day Moto went out exploring for insects to eat. Not far from his family's hilltop tree, he spotted a large shiny object in a little town that he could barely see in the distance below. "That shiny thing must be a place with good things to eat" thought Moto. For days he hopped from tree to tree making his way to the town. Once there, he discovered that the shiny object was unlike any tree that he had ever seen before. It was in fact, a granular chlorine factory; home of the world's finest sanitizing products.

Attracted by this strange sight, the little green frog hopped inside to see more. Little Moto was now so hungry that he boldly searched for something to eat in this unusual place. In one big leap, Moto landed on a sheet of tin. The tin was so hot that Moto bounced off quickly and fell to the ground in great pain. However, the little green frog was in luck, for the master engineer, Sumi, was just completing her final test of a futuristic new way to make chlorine odorless. This was a monumental event for Sumi; a triumph in making the world's purest, highest quality odorless chlorine. When Sumi saw the little green frog land on the hot tin though, she grieved for the poor creature that was accidentally injured.

Sumi carefully lifted Moto and treated his feet and toes with a special ointment and small bandages. Keeping his toes wrapped, Moto's condition improved quickly under Sumi's care and attention. In a special cedar box on Sumi's laboratory desk, Moto had his fill of insects that Sumi would provide. Moto became a living icon of Sumi's successful experiment and was very dear to the engineer. One night Sumi had a strange dream. She dreamt of her final experiment, the special hot tin bath and the heat reaction required in producing the pure odorless chlorine, only she saw it all from the eyes of Moto. She felt Moto's pain and his panic when he landed on the tin. Her toes burned and ached as if they were on fire. Sumi awoke from her dream eager to check on her little green friend.

Entering her laboratory the next morning, Sumi carefully unwrapped Moto's bandages. His feet were now completely healed, but to Sumi's surprise Moto's toes had turned bright red! -- a very rare sight. This was the only red-toed tree frog on the Island, maybe in all of Japan. Sumi and Moto became best friends. Moto stayed in Sumi's lab for the rest of his days and was well cared for.

As a direct result of evolutions from Sumi's discovery all those years ago, Oreq is proud to offer the highest quality chlorine products available. Just like Moto's bright red toes, Oreq is unique in its ability to provide the only high quality, low odor, individually wrapped chlorine tab...Scent-Trific. As such, It seems only fitting that we adopted Moto as the ClearView symbol of discovery, ingenuity, progress, and quality.
