Critical Usage Information

ClearView Calcium Increaser

ACTIVE INGREDIENT: CALCIUM CHLORIDE.....100%

The following is only the basic usage directions. Refer to the actual product label for First Aid, Warnings and other statements of use.

DIRECTIONS

This product should be pre-dissolved in a pail of water adding 1/2 pound of product to one gallon of water. Pour mixture into the deep end of the pool with the pump running. Repeat until the correct amount has been added. Avoid overtreating. If more than 3 pounds of this product is needed per 10,000 gallons of pool water, separate doses and apply this product at least 12 hours apart. This will give the pool water an opportunity to adjust and avoid clouding. Calcium hardness should be maintained between 150 and 350 ppm. To raise calcium hardness 10 ppm use 2 ounces per 1,000 gallons of pool water.
