

Spring Start-Up

Spring into the new swim season with products that prepare your pool for summer!

The Spring Start-Up is a 4 part system that brings new life to water that has been dormant over the winter months. Manufacturer warranties become void if products are not used in accordance with manufacturers instructions and recommendations. Due to uncontrollable weather conditions, these directions are to be used only as a guide. Contact your pool & spa dealer for treatment advice for your particular area.

Your Spring Start-Up Includes: Shimmer-N Shock Chlorine Formula, Super Crystal Clarifier, Poly Power 30, and Mineral Magnet

Put your pool to sleep for the winter: When water temperatures drop below 68°F in the fall.
And jump start your pool in spring: When water temperatures rise to 68°F or higher.

**PRECAUTION: NEVER MIX CHEMICALS TOGETHER.
ALWAYS ADD CHEMICALS TO WATER, NEVER WATER TO CHEMICALS.
HANDLE CHEMICALS SAFELY.**

INSTRUCTIONS

STEP 1: Prepare Your Pool

The following is a general guide to getting your pool ready for use and bringing it back to its proper chemical balance. Make sure the pool is clean of all dirt and leaves and the skimmer & pump basket are clear of debris. Clean the filter so it will be ready for spring startup. To get a good base of where you are starting from, have your water tested. This not only gives you the base of pH, Alkalinity, and chlorine levels, but can also point out any soluble metals in the water that may need to be addressed. Balance the pH and alkalinity. Once balanced, you are ready to apply the Spring Start-Up package.

STEP 2: Add Mineral Magnet:

Mix contents of Mineral Magnet in a pail of water and slowly pour around the perimeter of the pool, making sure the product is evenly dispersed in the pool water. Allow the filter and pump to run for at least (2) hours.

STEP 3: Add Shimmer n' Shock:

Add each 1 lb. pouch of Shimmer-N' Shock to the pool separately, following the directions on the package. Repeat the procedure for any additional pouches of Shimmer-N' Shock. Wait a minimum of 15 minutes before adding other chemicals. Triple rinse bucket before use with other chemicals.

STEP 4: Add Super Crystal Clarifier:

Pour entire bottle of ClearView Crystal Clarifier around the pool, making sure the product is evenly distributed in the pool water.

STEP 5: Add Poly Power 30:

Mix contents of Poly Power 30 in a pail of water and slowly pour around the perimeter of the pool, making sure the product is evenly dispersed.

Allow the pump to run for two (2) hours allowing the chemicals that have been added to circulate.

Over the course of the next few days, continue to brush, vacuum, and clean the filter until the water is clear. Check and adjust your water pH, alkalinity and sanitizer levels regularly and follow a standard pool care regimen to enjoy the rest of the summer.
